

With age, organ functionality progressively declines due to cellular deterioration, primarily caused by oxidative stress, resulting in a loss of vitality and quality of life.

This organic subfunctionality predisposes individuals to chronic degenerative diseases.

Damage from oxidative stress includes hepatic and degenerative diseases.

The provision of cellular extracts, cytokines, and embryonic growth factors exerts a renewing and revitalizing effect at the cellular level, increasing the specific functionality of the organ being treated.

Antioxidant enzymes neutralize free radicals, reducing oxidative stress damage.

Benefits

- Cellular revitalization of chondrocytes
- Improves Osteoarticular functions
- Reduces risks for osteoporosis
- Regenerates cartilage and fortifies bones

Highlights

- It includes homeotherapeutic cellular extracts from bone, cartilage, vertebrae, bone marrow, embryonic mesoderm, thymus, and placenta. These provide essential nutrients for the cells and tissues associated with osteoarticular function.
- It contains the enzyme Rhemacell, which plays a vital role in the cellular regeneration process.

Recommended Use

- **Preventive Action:** Take 2 tablets in the morning and 2 tablets at night, for at least 3 months.
- **Adjuvant Action:** Take 2 tablets in the morning and 2 tablets at night, for at least six months.
