

# Androcell

*Hormonal Regulator Man*

Andropause is the process by which a man's sexual capabilities diminish with age, along with other organic functions, as a result of low levels of testosterone in the body, or due to malfunctioning testosterone receptors.

As a result, quality of life decreases, leading to a series of problems including: loss of energy, fatigue, decreased concentration and memory capacity, depression, lack of motivation, irritability, muscle weakness, decreased sexual desire or impotence, reduced physical vigor, insomnia, weight gain, dry skin, osteoporosis, joint pain, and decreased stature.

Androcell® contains piperine, an important alkaloid amide, which has shown potent inhibitory activity against 5-alpha reductase, responsible for converting testosterone into dihydrotestosterone, whose main receptors are found in the hair (Androgenic Alopecia) and in the prostate.

Clinical trials have shown that maca extracts can increase libido and improve the quantity and quality of semen.

Nettle: contains flavonoids (with antioxidant and anti-inflammatory action), mineral salts, organic acids, and provitamin A.

## Benefits

- Reduction of risks associated with andropause.
- Significant improvement in mood.
- Promotes more restful sleep.
- Increases sexual desire and libido.

## Highlights

- Natural biological components.
- Homeotherapeutic cellular extracts of testicle and prostate.
- Extracts of Passiflora Incarnata, Piper Nigrum, Urtica Dioica, Ptychopetalum Olacoïdes, etc.

## Recommended Use

- **Andropause:** Take one capsule in the morning and one in the evening for 3 months.
- **Benign Prostatic Hyperplasia:** Take one capsule in the morning and one in the evening for 6 months. It is suggested to combine with Bioenzym®.
- **Pathologies:** Take one capsule in the morning and one in the evening for 12 months. Conduct medical evaluations every 3 months. Ideally combine with Bioenzym®.
- **Lack of Sexual Appetite:** Take two capsules in the morning and two in the evening for three months. Continue with one capsule in the morning and one in the evening for six months.
